

Sprint Review

Broad Overview:

The second sprint was primarily focused on gathering the requirements and doing an in-depth study of the project to get a better understanding of the client expectations. The sprint involved a lot of research work with regards to finding solutions for the problem.

The sprint involved multiple client meetings to gain a common and shared understanding of the problem and project requirements. The client also arranged meetings with other people of related domain knowledge for better understanding. The expectation was to build a dashboard which can be accessed by registered users to collect information and insights about IIIT water management system. In depth data analysis will also be present on the dashboard along with graphic representation of the IIIT water network.

Tasks at hand:

The primary objective of this sprint was to analyse the problem at hand, get a better and more detailed idea of the requirements of the software system and make a Software Requirements Specification (SRS) document. We also had to decide on a rough plan/schedule on how the system would be built.

Tasks Completed:

- Detailed analysis of the problem statement was done and requirements were noted down and documented to be referred to later.
- Software Requirements Specification (SRS) document prepared.
- A tentative schedule was prepared for completion of tasks and satisfaction of requirements.
- A rough plan was developed where the tasks are categorised as per R1/R2.
